

Prophy Cups, latex-free

Description

Latex-free prophylaxis cups with lamellae for thorough cleaning and polishing. Available in different versions and hardness (blue = soft, purple = medium, yellow = hard). The spray guard on the shoulder of the Cup effectively prevents paste from entering into the contra-angle handpiece.

Application

Prophy Cups used with prophylactic paste. The Prophy Cups were mounted on a dental contra-angle handpiece. After applying the paste to the cup or directly to the tooth, the dental contra-angle handpiece is placed on the tooth and is set in rotating motion.

Properties

- BLUE: Soft, for final polishing of the tooth surface, especially near the gingival sulcus to protect the soft tissue
- PURPLE: Medium, universal hardness for cleaning and polishing
- YELLOW: Hard, for removing severe plaque
- Becht prophylactic polishers are class IIa medical devices and are intended for single use only. All packaging units are shipped non-sterile.
- maximum working speed: 2500 min rpm
- latex free polishers are characterized by a particularly hardwearing material with a low coefficient of friction, which results in only minor warming of the tooth.

Shelf life

60 Months
